ASSET MANAGEMENT PORTAL

Asset Management System

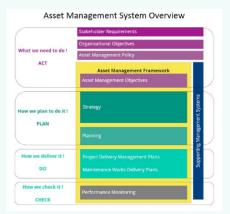

Maintenance Delivery 🗸 Project Delivery 🗸 Performance Monitoring 🗸 Risk Management V Asset Planning 🗸 Operations ~ Page details

> Our Asset Management System provides the framework to enable us to deliver asset management activities, achieve our asset management objectives & ensure we return value from our assets to our Stakeholders.

> > Please use the tiles below to learn more about our Asset Management System and how it all works.

Asset Information 🗸

Follow the ribbon above to find & use processes, documents & links that make up our Asset Management System.

How does our Asset Management System work to realise value from our Assets?

Stores & Procurement >

Our Asset Management System has 4 parts as per the diagram on the left. These parts take the Business Objectives/ Requirements & place them into an Asset Management Framework for us to define the Asset Management requirements & deliver on these objectives.

Standard Work

CLICK HERE TO LEARN MORE \rightarrow

What we need to do.

We utilise the feedback from our current performance (CHECK), along with direction from the overall business, to make decisions on our future Asset Management Strategies.

Maintenance Delivery V

How does our AMS work to realise value?

What is Asset Management?

What is an Asset Management System?

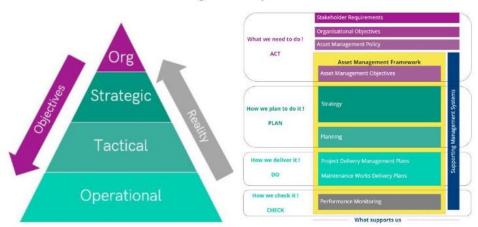

An Asset Management System is used to direct, coordinate and control the activities that realise value from assets.

Project Delivery 🔻 Performance Monitoring 🔻 Operations 🔻 Asset Information 🔻 Risk Management 🔻 Stores & Procurement 🔻 Standard Work <u>Submit Feedback of Site contents</u> Edit

The Asset Management System aligns asset decisions to corporate objectives and stakeholder expectations by providing a one-stop-shop for the policies, plans, business processes, documents and asset information systems that enable us to deliver asset management activities and achieve our asset management objectives.

The Hydro Tasmania AMS has been built to cover the elements of asset management in alignment with ISO 55001¹ and the <u>Global Forum on Maintenance and Asset Management (GFMAM)</u> & its <u>Landscape process groups (6 of)</u> which are further broken down into subject groups (39 of). Our Document or Links to the process that support our AMS utilise Metadata to define what Process Group & Subject Group they belong to within the Asset Management Landscape & the process owners which will allow for clear accountabilities & ability to audit easily.

Asset Management System Overview

As per the diagrams overview above:

- the Asset Management System takes the Organisational Objectives (What we need to do ACT),
- which guide us in the creation of our Strategic Asset Management Objectives & Tactical Plans (How we plan to deliver our Asset Management Objectives - PLAN),
- . which are then detailed into Operational Delivery Plans (How we deliver the work DO) &
- . the Reality is measured through Performance Monitoring (How we check the plan effectiveness & look for improvement CHECK).

Delivering Asset Management

How does our AMS work to

Asset management is the coordinated activity of an organisation to realise value fro...

PLAN - How we plan to realise value.

There are 2 major components that show how we plan to realise value. Strategic Asset...

DO - How we deliver Asset Management.

There are 2 ways that we deliver our Asset Management Activities. Maintenance Work Delivery Plans...

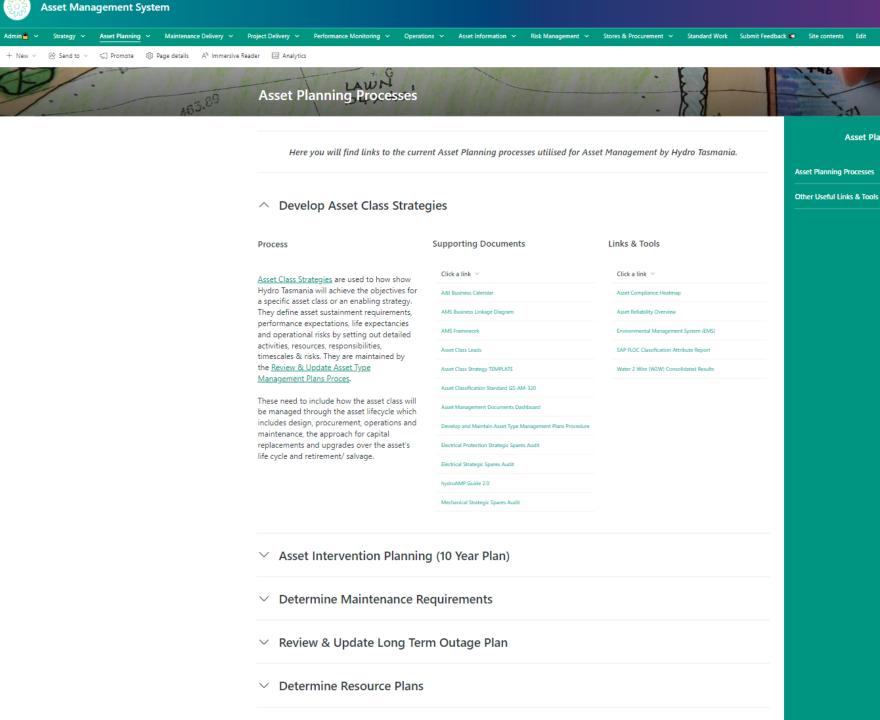

CHECK - How we monitor our progress.

Performance Monitoring is the way we check if we are meeting our Asset Management Objectives....

ACT - What we need to do?

We utilise the feedback from our current performance (CHECK), along with direction from the...

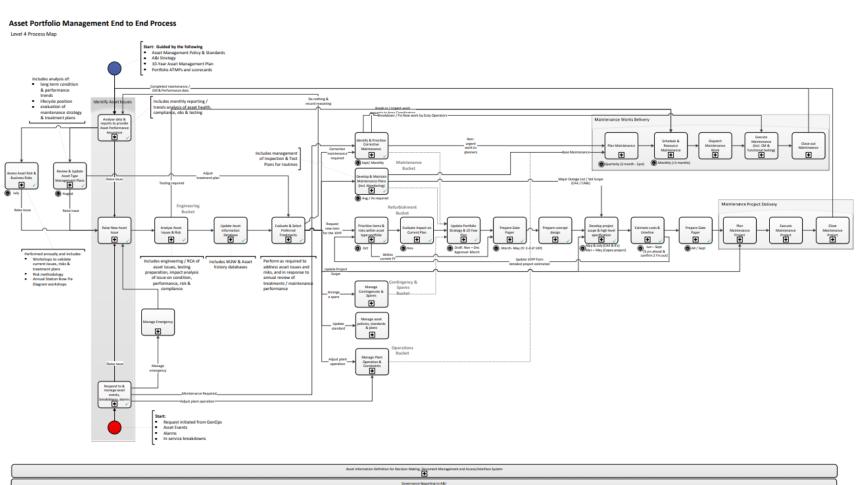

Asset Planning

Mid-Level Process

This is the End-to-End process flow of how we get value from our Assets.

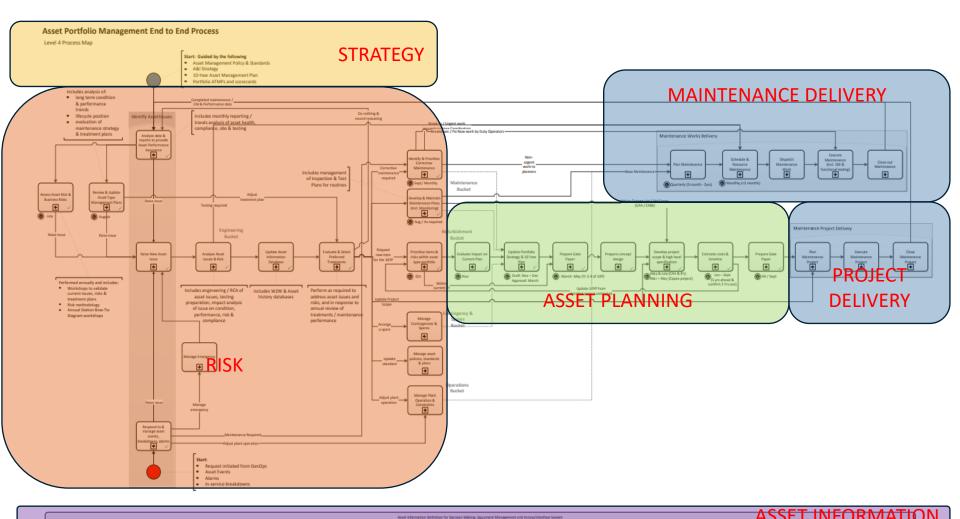

How do we turn a framework into a process (& an IT solution)?
