Transforming ECC6 UX with Build Work Zone

Andrew Dyer

ERP Superintendent, PanAust

#MasteringSAP #MasteringSAPCollaborate

What is BWZ and what is it for

- SAP say
SAP Build Work Zone enables you to easily build business sites that provide centralised access to business application information on any device.
- Is the replacement for the Launchpad Service
- Create sites comprising images and text with Fiori style tiles to access business applications
- Include cards on sites that can contain lists, charts, and other micro apps
- It is really designed to work with S/4. Not all features will work with ECC systems

Why use BWZ

- ERP landscape simplification
- Mobile first design, select applications can be accessed on tablet and/or mobile devices
- Mobile Start
- Modern, unified UI for all apps
- Bring the UI change impact of S/4 forward
- Enables further improvements
 - HR forms replacement
 - integration of all approvals/tasks in one place
 - display of operational analytics within the transactional system

Know your ...

- Users' challenges
- System landscape
- Future direction
- Enterprise Security

Fiori Concepts you lose

- Business catalogues v technical catalogues
- Assigning catalogues and groups to security roles
- Reference items
- Separation of navigation target and tile config

New things you get (compared to FLP)

- Ability to define pages and spaces
- Content import from source systems

Security

- Standard is to have IAS log you in to BWZ. IAS role is mapped to BWZ role.
- IAS 'should' be linked to your corporate AD (eg Entra ID), so you 'should' be mapping AD groups to IAS roles.
- Since back-end authorisations are required to drive Fiori apps, how do you ensure that only the apps you have authorisations for are shown?
 - You can send user roles from ECC to AD
 - You could use IPS to provision IAS users from ECC with roles
- Need principal propagation

Use Cases

- Vendor Portal
 - Allow suppliers to complete PO notifications and delivery notes
 - Create custom workflow for vendor data changes
- Mobility solution for on-premise systems
 - Deploy ESS and approval apps
 - Stocktake (barcode scanning) apps
 - Use Cloud Connector to provide access to back-end systems from mobile devices on the internet
