

Capability Uplift

We help lift the capability of your team as quickly as possible, focusing on specific areas you require assistance. Every engagement is bespoke, tailored specifically for your business.

Supply chains are fluid creatures and need to be this way to excel in the modern age. Are your processes and staff flexible enough to adapt to the constantly changing environment that supply chains operate?

What we offer

Our Capability Uplift Program was designed to offer businesses bursts of enablement to encourage quicker wins, and tangible results without embarking on a large-scale project. It enables you to do more with what you already have.

At Lexin Solutions, we believe your people are your greatest asset. By investing in them, we can achieve things that technology alone will never accomplish. Let us help you uplift your people so you can exceed your capabilities.

Book a session with one of our industry specialists to learn more about how our tailored programs can improve your business.

Focus Areas

- 1. Material Master Data Governance:** Fundamental to all Supply Chains, we help you develop and implement data governance and quality across your material master data.
- 2. Inventory Management:** Working capital tied up in inventory is both a blessing (risk reduction) and curse (cost impacts). We will help you find the right balance.
- 3. Warehouse Operations:** Physically managing inventory presents an entirely new set of challenges that we will help you overcome.
- 4. Procurement and Purchasing:** Efficiently manage the supply of materials to effectively meet the needs of your business and help improve the performance of the resources available.
